

DataSniff Capabilities Overview

Low Cost – High Value Information Integration & Sharing

DataSniff is the simplest way to contain costs associated with integrating and delivering data.

- ... Without the need for data warehouses, marts, or other consolidated data sources.
- ... Without the need for complicated ETL tools or processes.
- ... Without the need to duplicate data; making extra development and professional services unnecessary

DataSniff leverages legacy and foreign data sources eliminating expensive migration costs.

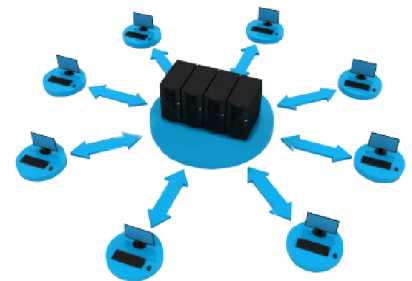

DataSniff as a Data Service

DataSniff provides direct, real-time access to a wide universe of data sources, including mainframe, relational and XML data.

Supported data types include: Oracle, MS SQL Server, MySQL (via ODBC), ODBC, XML, DB2, IMS, VSAM, QSAM, flat files, and meta-tagged unstructured data.

Data Mashup

DataSniff as a Data Delivery Tool

DataSniff employs an SOA approach allowing access and delivery of data from multiple host sources without having to update enterprise applications. DataSniff provides the information where you want it, when you need it by supporting mobile devices, enterprise applications, user tools, email or XML.

High Value – Small Footprint

DataSniff can be deployed as an ASP, as an appliance, or directly within your architecture.

Who Benefits from Deploying Datasniff?

Management Professionals

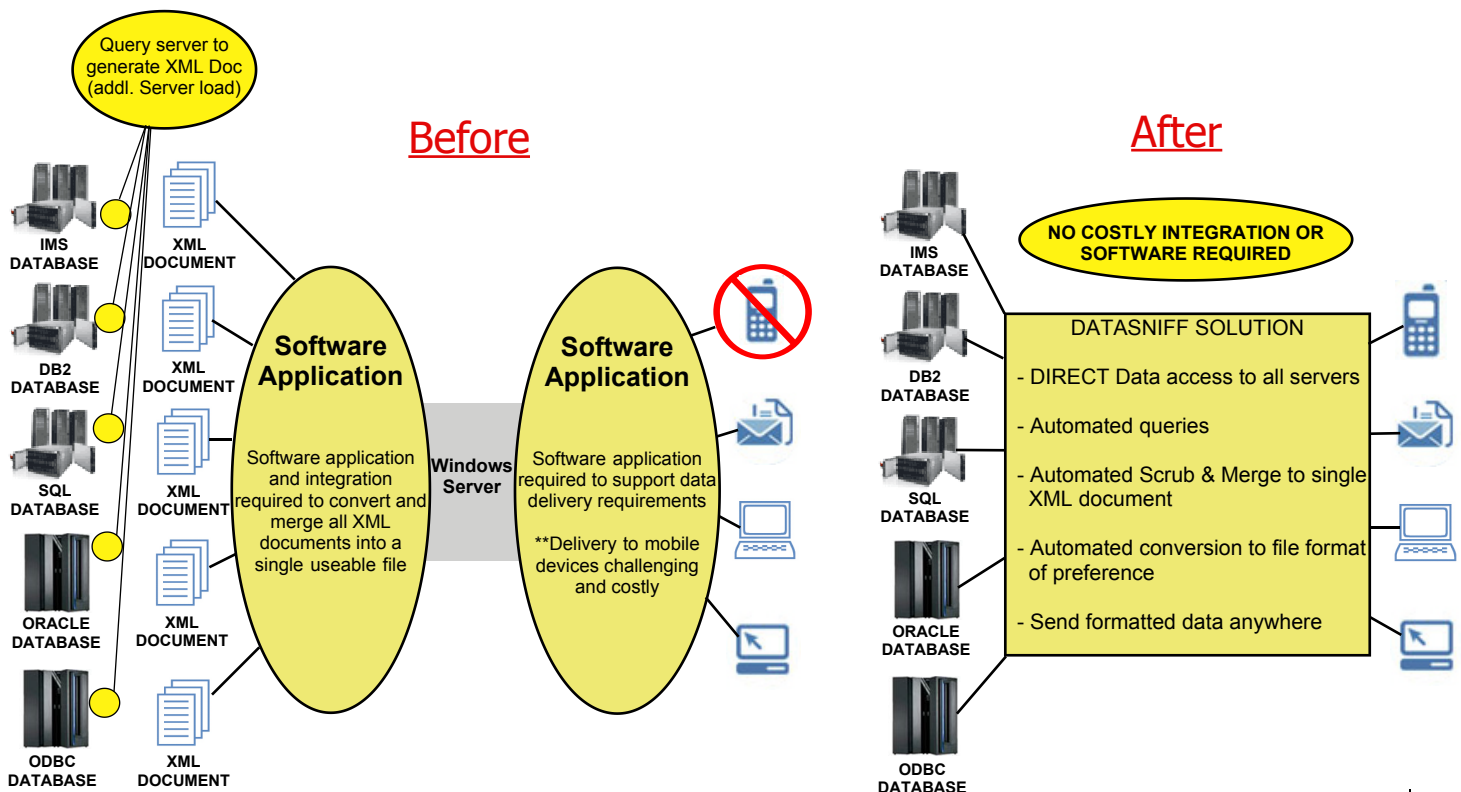

Agency Directors

IT Departments

- Corporations conducting M&A activity will benefit from immediate access to real time financial information from both companies
- Law Enforcement can share information between Federal, State and local agencies
- State and Federal Government Agencies can leverage existing mainframe systems without having to migrate to new enterprise software packages
- IT Departments will eliminate time consuming queries necessary to generate month-end financial reports

Applications with Real-Time Results

Kaiser Permanente, JNJ Ortho, TJMAXX and others are reaping the benefits of accessing and delivering their critical business information. Datasniff will provide your company with a competitive marketplace advantage by providing access to your critical information.

About DataSniff

DataSniff was established in 2004 by Xbridge Systems and is led by the renowned angel investor Ray Williams. Mr. Williams has over 40 years of business experience and is committed to helping customers utilize the hidden potential of information that is locked inside their disparate data. We are located in the heart of the Silicon Valley and you can find us on the web at www.datasniff.com or please give us a call at (650) 564-9800.
